## FLOOR HEATING

# HOTWIRE

## FLOOR HEATING

Hotwire Floor Heating may well be the very ultimate in home heating.

Floor heating radiates warmth from the ground up, heating not just your feet but your entire home. The heat is evenly spread throughout the entire room. It's just like standing outside in the first few days of Spring; beautifully warm and thoroughly luxurious. No dust or air is blown around the room making it perfect for sufferers of allergies.

Hotwire offers Under Tile and In Screed heating so no matter what your application Hotwire can offer you the perfect floor heating solution.

## UNDER TILE HEATING

**Heating for a room, an open living space, an entire house.**

Under Tile Heating is perfect for the Australian climate. The 4 mm thick element is placed directly on top of the concrete slab and the flooring simply laid over the top. As the element is so close to the floor surface your home will be warm in 30 – 60 minutes. \* The fully programmable touch screen thermostat can program your floor heating to switch on when you require it, so when you arrive home or get up in the morning your home is luxuriously warm and waiting for you.

Under Tile Heating is ideal if you are renovating as only the floor surface needs to be replaced to facilitate installation. You can cover an area as small as 1 m<sup>2</sup> through to the biggest living areas

With running costs as low as 2 c per m<sup>2</sup> per hour it sells itself.

Hotwire is perfect for a bathroom as the heating will not only heat the floor but also dry the floor meaning less mould and therefore less cleaning.

Contact Hotwire today for a quote or to find your nearest retailer or supply and install contractor.

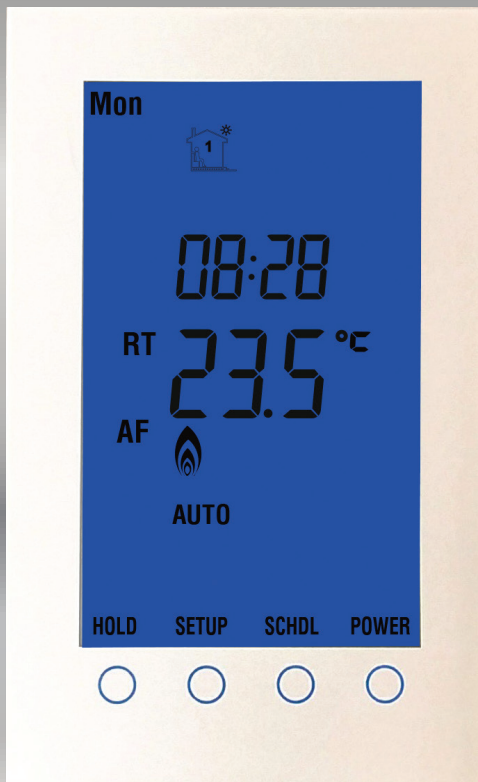

*\*Home insulation and some environmental factors can affect the heat up time of floor heating systems.*

# IN SCREED HEATING

In Screed Heating is ideal if you are installing a sand and cement screed over a floor surface or planning a polished concrete floor. Whether you are building a new bathroom or an extended living area In Screed Heating is a perfect solution. The element sits approximately 30mm deep in the screed and spreads an even warmth throughout the entire room.
